FREIGHT LINKS GROUP INVESTS \$13.5 MILLION IN HAZARDOUS AND DANGEROUS GOODS WAREHOUSE COMPLEX

- **Project to cater to increasing demands for hazardous or dangerous goods (DG) storage**
- **DG storage facilities fully compliant with international standards**

Singapore, 13th September 2006 – Freight Links Express Holdings Limited, an integrated logistics service provider listed on main board of Singapore Exchange, is investing \$13.5 million in a part single / part 3-storey warehouse complex dedicated for storage of hazardous or dangerous goods (DG).

Located at Penjuru Lane, the new Freight Links DG warehouse complex covers almost 130,000 sq ft. When completed in 2nd quarter of 2007, it will offer a high-density storage capacity of about 12,000 pallet positions, employing the Very-Narrow-Aisle (VNA) storage technology.

The warehouse will feature foam/water sprinklers, safety showers and gas detectors. In addition, Freight Links will also custom build an underground retention basin to contain spillage, and compartmentalized firewalls for different DG classifications. The state-of-the-art warehouse will be fully compliant with the international standard's latest code of practice for storage of dangerous goods.

Commenting on the new warehouse, Mr. Eric Khua, CEO of Freight Links Group said "the design adopts a very high safety standard, ensuring effective control of the storage and handling of DG so as to protect the safety and health of workers and the public as well as the protection of the property and the environment".

With this complex, Freight Links will be able to meet increasing demands of their customers in the areas of hazardous chemicals and dangerous goods. Singapore is one

of the key petrochemical hubs in the world. Global companies from United States, Europe, Japan and around the world are making their presence felt in Jurong Petrochemical Complex. With this new complex in close proximity, Freight Links can better meet increasing demand for storage facilities and value-added services.

LTH Logistics, a chemical logistics subsidiary of Freight Links will centralize its chemical warehousing and logistical activities into one location. In addition to the cost effectiveness of such consolidation, it will enhance the safety standards that will meet both the regulatory requirements as well as HSSE standards of Freight Links' customers. More value-added services, such as drumming, repacking, labeling, and stenciling can now be offered to existing and potential customers.

About Freight Links Group
